

The UX of the Paris Opera House

John Boykin
info@ApplegateLLC.com

Charles Garnier, architect

Studied how crowds

circulate through public spaces

interact

loiter

Studied

how far apart strangers need to sit and stand to
feel comfortable

why people went to the opera

Key insight

Most people did not go to the opera for the opera

Most went for the social experience:

Who else is here?

Who are they with?

How do they look?

Show off my finery, jewels, partner, grace

So Garnier designed first for people to see and be seen

Aesthetics and music came in second

Stairway

Stairway

Short steps
so women
in gowns
can step
gracefully

Stairway

Surrounding
balconies to
watch

Stairway

Cross section of huge building

Theatre seats only ~2,000

Foyer

Mirrors

Theatre

Horseshoe shape so
everyone can see
everyone

Theatre

Horseshoe shape so everyone can see everyone

Theatre

Curved rows so
everyone can see
everyone

Red
upholstery is
to reflect pink
light to make
ladies look
their best

Theatre

Boxes arranged so
everyone can see
everyone

See and be seen

By designing first for the real job to be done, Garnier
delighted patrons
created the model for most concert halls to come
set a good precedent for designing anything
